SDI Films Video on Fire Rated Doors

February 27 FONTANA, California – The Steel Door Institute (SDI) has released its first video, which is about the manufacturing and testing of fire rated doors.

Filming took place at the Door Components facility in Fontana, CA. Door Components is one of 11 hollow metal door manufacturers who are SDI members. The video offers an inside look at the facility, information about various door cores, how doors are manufactured, and actual fire test footage.

Jeff Wherry, Managing Director of SDI, said, “We’re happy to present the Steel Door Institute’s first video. Fire rated doors are an important part of this industry. We think architects and specifiers will enjoy seeing what goes on behind the scenes in manufacturing and testing these products.”

SDI, which prepares and publishes standards for steel doors and frames, provides code requirements for the design and use of fire doors in its publication [SDI-118](#).

The video can be viewed on the SDI website by clicking [here](#) or on YouTube by clicking [here](#).

About the Steel Door Institute

The Steel Door Institute (SDI) was established in 1954 as a voluntary, unincorporated, non-profit business association whose mission is to promote the use of steel doors and frames in the construction industry. Representatives of SDI member companies create and publish manufacturing, quality and performance standards promulgated by the association, and distribute them to licensed architects and construction specifiers at no charge.

Membership is open to all American based companies engaged in the production for sale of swing steel doors and/or frames on a national basis for at least two years. Members mutually agree to establish and abide by SDI manufacturing and quality standards that apply to all doors and frames they produce.
