SDI Launches Mobile Website for Easier Access to Information

April 9, 2014 WESTLAKE, Ohio – SteelDoor.org has gone mobile, making it easier for architects and construction professionals in the field to access SDI standards and other time-critical information about steel doors and frames.

While the SDI website has always been viewable on handheld devices, the new mobile website is optimized for smartphones, with large buttons and streamlined content.

This new feature is a true mobile website, not an app, so users don't have to download anything. By pointing their smartphone to steeldoor.org, users can look up standards, FAQ, the glossary and other useful information.

Jeff Wherry, SDI Managing Director, explained, "Architects are always on the go. So we researched the standards and FAQ that mobile visitors reference the most, and created a separate version of the website that makes it easy for them to find what they need from their phone."

#####

About the Steel Door Institute

The Steel Door Institute (SDI) was established in 1954 as a voluntary, non-profit business association that develops quality and performance standards for steel doors and frames.

Representatives of SDI member companies create and publish these standards, which are made available without charge to architects and other design professionals to ensure quality and consistency of hollow metal doors and frames used in construction. www.steeldoor.org
