Two new videos on steel door frame installation available from the Steel Door Institute

July 9, 2014 WESTLAKE, Ohio - Two new video clips intended for architects, facility managers, construction managers, and others involved with door frame installation are now available from the Steel Door Institute (SDI). Approximately nine minutes long, each video may be viewed free of charge online or on smartphones in the field, during frame installation.

The first video provides guidance on frame installation in steel stud construction, while the second video addresses installation in masonry construction. Each video provides step-by-step instructions and tips, and each is available at SDI's website, as well as on SDI's YouTube channel:

SDI's website: www.steeldoor.org/videos.php

YouTube steel stud construction video: www.youtube.com/watch?v=O69q6FHR99U

YouTube masonry construction video: www.youtube.com/watch?v=vWFJ1OK00dU

Jeff Wherry, SDI Managing Director, said "It's essential to install doors and frames properly. Often, when there's an issue with a door or frame, people blame the manufacturer when in fact the problem lies with poor installation. We developed these videos to guide installers on proper frame installation."

#####

About the Steel Door Institute

The Steel Door Institute (SDI) was established in 1954 as a voluntary, non-profit business association that develops quality and performance standards for steel doors and frames.

Representatives of SDI member companies create and publish these standards, which are made available without charge to architects and other design professionals to ensure quality and consistency of hollow metal doors and frames used in construction. www.steeldoor.org
