Electronic Hinge Preparations

1 Purpose

It is the intention of this document to furnish users of standard steel frames with practical information regarding an acceptable method for preparing frames for 4-½", 5" or continuous electric hinges. This document will allow frame manufacturers to provide frames prior to having knowledge of the specific electric hinge being used.

2 Scope

The information contained herein pertains to frames manufactured in accordance with ANSI/SDI A250.8. The preparation as defined herein will accommodate the majority of electric hinges sold. It is the responsibility of the hardware specifier to assure compatible hinges are used.

3 Reference Documents

ANSI/SDI A250.6 *Recommended Practice for Hardware Reinforcings on Standard Steel Doors and Frames*

ANSI/SDI A250.8 *SDI 100 Specifications for Standard Steel Doors & Frames*

ANSI/BHMA A156.7 *Template Hinge Dimensions*

ANSI/BHMA A156.115 *Hardware Preparation in Steel Doors and Steel Frames*

4 Location

The preparation for electric hinges is intended to be non-load bearing. Therefore it shall be located in the center hinge preparation on frames with 1-½ pair of hinges, and on the second hinge from the bottom on frames with 2 pair of hinges.

5 Hinge Reinforcement

The hinge reinforcement shall comply with ANSI/SDI A250.6 and ANSI/SDI A250.8, and shall incorporate cutouts as shown in Figures 1, 2, 3 and 4.

6 Junction Box

A junction box may be provided to facilitate wiring and connector installation. In addition, a hole shall be provided at the top and bottom of the junction box to facilitate conduit (see Figure 4). It is the responsibility of the electrical contractor to plug any unused holes.

- Note 1:** The hinge backset on the door varies by hollow metal door manufactures from 3/16" to 1/4"
- Note 2:** The hinge backset on the frame varies by hollow metal frame manufactures from 5/16" to 3/8"
- Note 3:** Extra holes may occur in the reinforcement for tooling and installation fixturing.
- Note 4:** Some manufacturers offer a removable feature (e.g. - wire, shim, standoff projection) to allow conversion of a standard weight preparation for use with heavy weight hinge butt.
- Note 5:** The most common mortise depths are in accordance with ANSI/BHMA A156.1 as follows:
 Standard Weight butt 0.146"
 Heavy weight butt 0.190"

Figure 1 – Preparation of 1 3/4" Steel Doors & Frames for 5" Full Mortise Electric Hinge

Note 1: The hinge backset on the door varies by hollow metal door manufactures from 3/16" to 1/4"

Note 2: The hinge backset on the frame varies by hollow metal frame manufactures from 5/16" to 3/8"

Note 3: Extra holes may occur in the reinforcement for tooling and installation fixturing.

Note 4: Some manufacturers offer a removable feature (e.g. - wire, shim, standoff projection) to allow conversion of a standard weight preparation for use with heavy weight hinge butt.

Note 5: The most common mortise depths are in accordance with ANSI/BHMA A156.1 as follows:

Standard Weight butt 0.134"

Heavy weight butt 0.180"
